Summary

Final-year B.Tech CSE (AI) student with hands-on experience in Python, Machine Learning, NLP, and Generative AI systems. Built production-oriented AI applications involving model evaluation, RAG pipelines, APIs, and scalable workflows. Strong foundation in data structures, OOP, and problem solving.

Skills

Programming & Core CS: Python, Java, SQL, OOP, Data Structures & Algorithms

Machine Learning / AI: Scikit-learn, Pandas, NumPy, TensorFlow, PyTorch, NLP, BERT, Model Evaluation, GridSearchCV

Generative AI: LangChain, LangGraph, RAG, GPT-4, Embeddings, LangSmith, Hugging Face, Prompt Engineering

Tools / Deployment: FastAPI, REST APIs, Docker, Git, Streamlit, Plotly

Databases: MongoDB, MySQL, Qdrant, Pinecone, ChromaDB

Projects

Autonomous AI Financial Analyst | Python, LangGraph, LangSmith, Gemini 2.5, Qdrant

- Architected a 5-agent LangGraph workflow with Hybrid RAG over SEC filings using Qdrant vector DB and semantic embeddings, enabling accurate financial document retrieval and structured insight generation.
- Built an automated LangSmith evaluation pipeline that grades agent reasoning against a ground-truth dataset; deployed a Bloomberg-style Streamlit dashboard with live Plotly charts on AWS/GCP.

Customer Churn Prediction & Risk Analysis | Python, Scikit-Learn, Gradient Boosting, Grid Search

- Engineered and compared four classifiers (Logistic Regression, Decision Tree, Random Forest, Gradient Boosting) with GridSearchCV hyperparameter tuning on 7,000+ records, achieving 85% accuracy and 0.82 AUC-ROC.
- Conducted end-to-end EDA to surface high-risk segments (Month-to-Month contracts, Fiber Optic services) and evaluated models using Precision, Recall, and F1-score to ensure production-readiness.

CritiqueConnect (AI Feedback App) | Python, BERT, GPT-4 | *IEEE Published*

- Designed a hybrid NLP pipeline combining BERT for semantic text understanding with GPT-4 for personalised feedback generation, reducing generic AI responses through prompt and system-level design.
- Led a 4-member Agile team to ship real-time LLM features iteratively, validating end-to-end LLM integration in a live user-facing product.

Experience

Frontend Web Development Intern

May 2025 – Aug 2025

Gymbrawns Enterprises (Remote)

- Integrated RESTful APIs to handle asynchronous data pipelines between frontend components and backend services, ensuring consistent data flow and system reliability.
- Refactored component architecture for improved reusability and scalability, applying software engineering best practices (modularity, separation of concerns) transferable to ML system design.

Education

KIET Group of Institutions, Ghaziabad, U.P

Sept 2022 – June 2026

B.Tech in Computer Science & Engineering (AI)

Publications

Critique Connect: Augmenting Human Creativity through AI-Driven Semantic Analysis

IEEE 9th International Conference (ICECA 2025) | Nov 2025

Achievements & Certifications

- DeepLearning.AI: AI Agentic Design Patterns with AutoGen
- AWS Academy Cloud Foundations – AWS Academy, Nov 2024
